

AI – What's it all about?

What is artificial intelligence (AI)?

Artificial intelligence is the simulation of human intelligence processes by machines, especially computer systems. Specific applications of AI include expert systems, natural language processing, speech recognition and machine vision.

What is Chat GPT?

<https://openai.com/blog/chatgpt>

“We’ve trained a model called ChatGPT which interacts in a conversational way. The dialogue format makes it possible for ChatGPT to answer followup questions, admit its mistakes, challenge incorrect premises, and reject inappropriate requests.”

AI Singularity

- Wikipedia: The **technological singularity**—or simply the **singularity** is a **hypothetical** future point in time at which technological growth becomes uncontrollable and irreversible, resulting in unforeseeable changes to human civilization.
- Stephen Hawkings: Some scientists, including Stephen Hawking, have expressed concern that artificial superintelligence (ASI) could result in human extinction.

2001 A Space Odyssey (1968)

- It was explained in 2010 that the source of HAL's madness stemmed from **him being given mutually exclusive directives**. The politicians in charge of the Discovery mission ordered him to lie to the crew about the actual mission goals, while the engineers and mission planners ordered him to be completely truthful.
